ANALYTICS DEVELOPER

Job Description

Celer is looking for a software developer to build the Analytics platform. The project is still in R&D, so you'll be part of the problem solving process akin to early stage development and be able to shape its trajectory. You'll use exciting new technologies like Storm and Hadoop to process a large amount of data, and create cool real-time visualizations for our clients.

We are looking for someone with a quantitative mind and an eagerness to learn. If you enjoy the process of creating innovative and efficient solutions without hard specs, then you would be a great fit!

Personality wise we are a small team who don't take ourselves too seriously. It is a relaxed atmosphere where everyone's ideas matter. We are looking for someone who can slot straight into this set up.

Key Responsibilities

- Develop server-side & desktop applications
- Testing
- Framework design
- Dashboard visualization
- Deploy & maintain the Analytics server
- Meet with clients to discuss requirements

Required Experience

- ☑ Java

Amazing to haves

- + JavaFX
- + Storm
- + Hadoop
- + Unix

About the Company

We are a young Fin-tech founded due to frustrations with rigid trading technologies. We are passionate about creating flexible and forward thinking software that has the user's needs at the heart of it.

We're based in the super central Moorgate. The office is a great place to work and hosts design and tech events weekly providing a great work / play mix. We also have offices in Hong Kong and are expanding to New York so there are opportunities to explore outside of England's green and pleasant land.
