
QA AUTOMATION ENGINEER

Job Description

This role is a challenging and rewarding one that will offer you the chance to learn a vast amount of knowledge in both the financial and technology industries.

We are looking for someone who can transform our predominantly manual system testing into a lean mean fully automated machine. Someone who absorbs information, is systematic and thorough.

Personality wise we are a small team who don't take ourselves too seriously. It is a relaxed atmosphere where everyone's ideas matter. We are looking for someone who can slot straight into this set up.

Key Responsibilities

-  Design and build test environments to cover functional and performance test scenarios.
-  Execute tests to ensure quality assurance
-  Work with Support team to develop testing automation

Required Experience

- Java
- Selenium
- SQL & Hbase
- Unix skills
- Source Tree / Git Hub

About the Company

We are a young Fin-tech founded due to frustrations with rigid trading technologies. We are passionate about creating flexible and forward thinking software that has the user's needs at the heart of it.

We're based in the super central Moorgate. The office is a great place to work and hosts design and tech events weekly providing a great work / play mix. We also have offices in Hong Kong and are expanding to New York so there are opportunities to explore outside of England's green and pleasant land.
