
REACT DEVELOPER

Position

Financial Tech is a market which is going through a lot of exciting change with applications having more focus on user interaction and branding. We are looking for a React Web developer to work with our current team to produce and maintain market leading applications across many different platforms.

The role is an exciting opportunity to build from the ground up on new products, working alongside a designer to turn UI mockups into working applications. You will be encouraged to forward think user issues and create efficient alternative ideas for increased performance and usability.

Knowledge of Financial markets is by no means required.

The Person

A forward thinker, who develops with the user in mind. Foreseeing problems and working with the team to solve them. Enthusiastic about taking on challenges and getting stuck in with projects. Open minded with a willingness to learn and develop as person. Has an appreciation for good design and who can see the small details that make it up. But above all we are looking for a friendly face who can slot into the current team.

Who We Are

Celer Technologies is a young financial technology company who are bringing modern reliable software to an ever demanding market. We are constantly trying to push ourselves and the industry further, nothing is taken for granted and we always looking to improve the products and services we provide.
